Something New for Your Catalogue

NEW ORCHID CALLA (Arum Aristatum)

CLUCAS & BODDINGTON CO.

812-814 Greenwich St. NEW YORK Corner Jane St.

Electrotypes of Above, $1.50 Each

For Description and Price see page 2.
NEW ORCHID CALLA

(Arum Aristatum)

"A CHILD CAN GROW IT"

This is a most interesting and curious plant. It can always be depended upon flowering freely without being planted, either in soil or water; by placing the bulb in an ornament or on a shelf, or suspended in the air, it will bloom without nourishment like an Orchid. The flowers outside of spathe are greenish yellow; inside, dark purple and spotted. The foliage is also quite ornamental.

It can be safely recommended to customers, and is certain to please, it having been thoroughly tested and sent out by leading European houses. Electrotypes furnished at cost. See illustrations.

COLLECTOR’S DESCRIPTION OF THE ORCHID CALLA

"This wonderful bulb from South Africa, under certain conditions, grows without soil or water.”

"The corm or bulb can be placed upon a bench or table in a living room and within a short time will start to grow and develop a long green shoot which grows very quickly, from which a large and wonderful flower, nearly 18 inches in height, unfolds; the color of the flower outside is greenish yellow, inside dark purple and spotted.”

"After the plant has flowered the bulb can be planted in the garden or in a pot and placed in a greenhouse or living room; it will then develop immense foliage measuring nearly 3 feet in circumference.”

"When the bulb has been harvested and thoroughly ripened it can again be developed in the preceding manner either in a room or greenhouse, and soon the marvelous flower will again appear.”

BLACK CALLA LILY Bulbs

(Arum Sanctum)

The plant produces one large flower the shape of a calla, but from 14 to 18 inches long and 14 inches broad, and of a rich, dark purple color and green underneath. The spathe rising from the center of the flower is about 10 inches long, velvet-like and quite black. The leaves are large and of a rich green color, and resemble those of the Calla Aethiopica.
